

PART A

QUANTITATIVE

$$\textcircled{1} \frac{16}{x} \times 2 = 4$$

$$\frac{32}{x} = 4 \Rightarrow 32 = 4x$$

$$x = \frac{32}{4} = 8 \quad \underline{\underline{C}}$$

$$\textcircled{2} \frac{1}{4} \div 4 \Rightarrow \frac{1}{4} \times \frac{1}{4} = \frac{1}{16}$$

$$\frac{1}{16} \times \frac{1}{16} = \frac{1}{256} \quad \underline{\underline{E}}$$

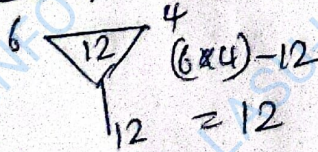

$$\textcircled{3} \frac{x}{4} \times \frac{1}{6} = \frac{1}{36}$$

$$\frac{x}{24} = \frac{1}{36} \Rightarrow \frac{x}{24} = \frac{1}{36}$$

$$36x = 24$$

$$x = \frac{24}{36} = \frac{2}{3} \quad \underline{\underline{B}}$$

Sample B

$$\textcircled{4} (10 \times 6) - 20$$

$$= 60 - 20 = 40 \quad \underline{\underline{E}}$$

$$\textcircled{5} (20 \times 5) - x = 80$$

$$100 - x = 80$$

$$x = 100 - 80 = 20 \quad \underline{\underline{C}}$$

$$\textcircled{6} (x \times 5) - 25 = 100$$

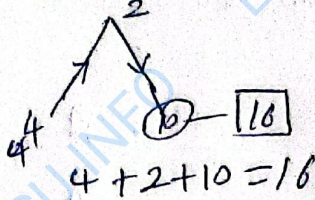

$$5x = 100 + 25$$

$$5x = 125$$

$$x = \frac{125}{5} = 25 \quad \underline{\underline{C}}$$

NCEE 2022 PAPER 2

Sample C

$$\textcircled{7} 8 + 2 + 26 = 36 \quad \underline{\underline{E}}$$

$$\textcircled{8} 10 + 5 + x = 55$$

$$15 + x = 55$$

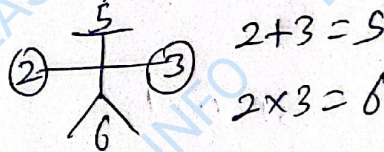

$$x = 55 - 15 = 40 \quad \underline{\underline{D}}$$

$$\textcircled{9} x + 6 + 25 = 60$$

$$x + 31 = 60$$

$$x = 60 - 31 = 29 \quad \underline{\underline{C}}$$

Sample D

$$\textcircled{10} x + 5 = 8$$

$$x = 8 - 5 = 3 \quad \underline{\underline{B}}$$

$$\textcircled{11} 5 \times 6 = 30 \quad \underline{\underline{C}}$$

$$\textcircled{12} 18 + 17 = 35 \quad \underline{\underline{B}}$$

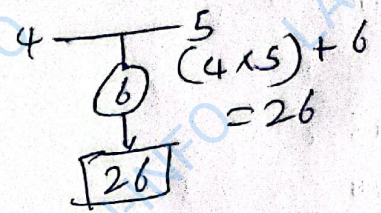

$$\textcircled{13} 8\frac{1}{2} + x = 18$$

$$x = 18 - 8\frac{1}{2} \Rightarrow 18 - \frac{17}{2}$$

$$\frac{18}{1} - \frac{17}{2} = \frac{36 - 17}{2}$$

$$= \frac{19}{2} = 9\frac{1}{2} \quad \underline{\underline{D}}$$

Sample E

$$\textcircled{14} (2 \times 3) + 5$$

$$= 6 + 5 = 11 \quad \underline{\underline{D}}$$

$$\textcircled{15} (4 \times 1) + x = 10$$

$$4 + x = 10$$

$$x = 10 - 4 = 6 \quad \underline{\underline{D}}$$

$$\textcircled{16} \left(\frac{4}{6} \times x\right) + 20 = 44$$

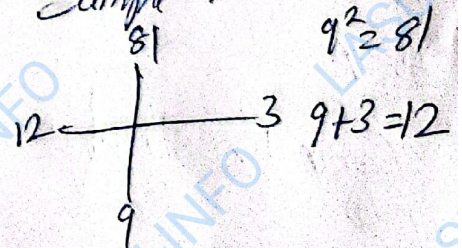

$$\frac{4x}{6} = 44 - 20 = 24$$

$$\frac{4x}{6} = 24 \Rightarrow 4x = 24 \times \frac{6}{4}$$

$$4x = 120$$

$$x = \frac{120}{4} = 30 \quad \underline{\underline{D}}$$

Sample F

$$\textcircled{17} 2^2 = 4 \quad \underline{\underline{E}}$$

$$\textcircled{18} x^2 = 900$$

$$x = \sqrt{900} = 30 \quad \underline{\underline{C}}$$

$$\textcircled{19} 13 + 4 = 17 \quad \underline{\underline{D}}$$

$$\textcircled{20} \frac{1}{5} + x = \frac{4}{5}$$

$$x = \frac{4}{5} - \frac{1}{5} = \frac{4-1}{5} = \frac{3}{5} \quad \underline{\underline{B}}$$
